

The Visual Text Editor

Also called the WYSIWIG (for What You See Is What You Get) editor, Blackboard's Visual Text Editor allows you to format text in Blackboard without writing your own HTML or copying and pasting from Microsoft Word.

The **Visual Text Editor** is similar to other WYSIWYG editors. It allows you to bold, italicize, underline, and otherwise format text. You can also create numbered or bulleted lists.

The following two graphics display the functions of the various tools you will find in the visual text editor's menu.
